DETAILED ACTION

Claim Objections

Claim 199 is objected to because of the following informalities: it has an incorrect status identifier, it should be identified as "new" and not as "previously presented". Appropriate correction is required.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 175-187 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. The claimed method consists solely of the manipulation of an abstract idea and is not concrete or tangible. See In re Warmerdam, 33 F.3d 1354, 1360, 31 USPQ2d 1754, 1759 (Fed. Cir. 1994). See also Schrader, 22 F.3d at 295, 30 USPQ2d at 1459. In addition, the claim is devoid of any limitation to a practical application in the technological arts and includes merely a trivial use of technology (see MPEP 2106).

For a claim to be statutory, it must be in the technological arts (see In re Musgrave, 167 USPQ 280 (CCPA 1970) and In re Johnston, 183 USPQ 172 (CCPA 1974)).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 3624

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 175, 176, 178-187, 190-197, 199 are rejected under 35 U.S.C. 102(e) as being anticipated by Joao et al. (US 6047270A).

Joao et al. disclose a method for effecting a sale using a communication network (col. 8, lines 10-25) by storing a plurality of predetermined sale limits for a plurality of users (col. 8, lines 25-45), receiving a transmitted request for sale transaction (col. 6, lines 5-20), receiving information transmitted from a user in the sale transaction, using the information from the user in the sale transaction to identify a predetermined sale limit for the user in the sale transaction and limiting the user in the sale transaction to the predetermined sale limit (see col. 8, lines 5-65) (claims 175, 190,195).

Specifically as to claim 176, where the predetermined sale limit identifies a maximum sale amount permitted within a predetermined period of time (see col. 8, lines 25-45).

Specifically as to claim 178, where the password is a personal identification number (see col. 7-8).

Specifically as to claim 179, where the information transmitted from a user includes address information associate d with the user (see col. 11-12).

Specifically as to claim 180, where the address information is a computer network address (see above for claim 179).

Application/Control Number: 09/432,811

Art Unit: 3624

Specifically as to claim 181, where the address information is a billing address (see above claim 179).

Page 4

Specifically as to claim 182, verifying the address information, (see col. 8-9).

Specifically as to claim 183, determining a sale limit for a user for whom no predetermined sale limit has been stored in the step of storing (see col. 8).

Specifically as to claim 184, consulting one or more external databases (see col. 8).

Specifically as to claim 185, external database is a banking institution (see cols. 6 and 8).

Specifically as to claim 186, effecting the sales transaction, storing information identifying an amount of the transaction, and using the information (see cols. 6 and 8).

Specifically as to claim 187, reducing a user's predetermined sales limit based on the stored information identifying an amount of the sales transaction (see cols. 5, 6, 8).

Specifically as to claim 191, see above rejections for claims 175, 190 and 195.

Specifically as to claim 192, see above rejections for claims 175, 190 and 195.

Specifically as to claim 193, see above rejections for claims 175, 190 and 195.

Specifically as to claim 194, see above rejections for claims 175, 190 and 195.

Specifically as to claim 196, see above rejections for claims 175, 190 and 195.

Specifically as to claim 197, see above rejections for claims 175, 190 and 195.

Specifically as to claim 199, see above rejections for claims 175, 190 and 195.

Response to Arguments

Applicant's arguments with respect to claims 175, 176, 178-187, 190-197 and 199 have been considered but are most in view of the new ground(s) of rejection.

Art Unit: 3624

Applicant's arguments do not comply with 37 CFR 1.111(c) because they do not clearly point out the patentable novelty which he or she thinks the claims present in view of the state of the art disclosed by the references cited or the objections made. Further, they do not show how the amendments avoid such references or objections.

Applicant's arguments fail to comply with 37 CFR 1.111(b) because they amount to a general allegation that the claims define a patentable invention without specifically pointing out how the language of the claims patentably distinguishes them from the references.

Regarding the 35 U.S.C 101 rejection, the following further explanation is given:

As an initial matter, the United States Constitution under Art. I, §8, cl. 8 gave Congress the power to "[p]romote the progress of science and useful arts, by securing for limited times to authors and inventors the exclusive right to their respective writings and discoveries". In carrying out this power, Congress authorized under 35 U.S.C. §101 a grant of a patent to "[w]hoever invents or discovers any new and useful process, machine, manufacture, or composition or matter, or any new and useful improvement thereof." Therefore, a fundamental premise is that a patent is a statutorily created vehicle for Congress to confer an exclusive right to the inventors for "inventions" that promote the progress of "science and the useful arts". The phrase "technological arts" has been created and used by the courts to offer another view of the term "useful arts". See *In re Musgrave*, 167 USPQ (BNA) 280 (CCPA 1970). Hence, the first test of whether an invention is eligible for a patent is to determine if the invention is within the "technological arts".

Further, despite the express language of §101, several judicially created exceptions have been established to exclude certain subject matter as being patentable subject matter covered by §101. These exceptions include "laws of nature", "natural phenomena", and "abstract ideas". See *Diamond v. Diehr*, 450, U.S. 175, 185, 209 USPQ (BNA) 1, 7 (1981). However, courts have found that even if an invention incorporates abstract ideas, such as mathematical algorithms, the invention may nevertheless be statutory subject matter if the invention as a whole produces a "useful, concrete and tangible result." See *State Street Bank & Trust Co. v. Signature Financial Group, Inc.* 149 F.3d 1368, 1973, 47 USPQ2d (BNA) 1596 (Fed. Cir. 1998).

This "two prong" test was evident when the Court of Customs and Patent Appeals (CCPA) decided an appeal from the Board of Patent Appeals and Interferences (BPAI). See *In re Toma*, 197 USPQ (BNA) 852 (CCPA 1978). In *Toma*, the court held that the recited mathematical algorithm did not render the claim as a whole non-statutory using the Freeman-Walter-Abele test as applied to *Gottschalk v. Benson*, 409 U.S. 63, 175 USPQ (BNA) 673 (1972). Additionally, the court decided separately on the issue of the "technological arts". The court developed a "technological arts" analysis:

The "technological" or "useful" arts inquiry must focus on whether the claimed subject matter...is statutory, not on whether the product of the claimed subject matter...is statutory, not on whether the prior art which the claimed subject matter purports to replace...is statutory, and not on whether the claimed subject

Art Unit: 3624

matter is presently perceived to be an improvement over the prior art, e.g., whether it "enhances" the operation of a machine. *In re Toma* at 857.

In *Toma*, the claimed invention was a computer program for translating a source human language (e.g., Russian) into a target human language (e.g., English). The court found that the claimed computer implemented process was within the "technological art" because the claimed invention was an operation being performed by a computer within a computer.

The decision in *State Street Bank & Trust Co. v. Signature Financial Group, Inc.* never addressed this prong of the test. In *State Street Bank & Trust Co.*, the court found that the "mathematical exception" using the Freeman-Walter-Abele test has little, if any, application to determining the presence of statutory subject matter but rather, statutory subject matter should be based on whether the operation produces a "useful, concrete and tangible result". See *State Street Bank & Trust Co.* at 1374. Furthermore, the court found that there was no "business method exception" since the court decisions that purported to create such exceptions were based on novelty or lack of enablement issues and not on statutory grounds. Therefore, the court held that "[w]hether the patent's claims are too broad to be patentable is not to be judged under §101, but rather under §\$102, 103 and 112." See *State Street Bank & Trust Co.* at 1377. Both of these analysis goes towards whether the claimed invention is non-statutory because of the presence of an abstract idea. Indeed, *State Street* abolished the Freeman-Walter-Abele test used in *Toma*. However, State Street never addressed the second part of the analysis, i.e., the "technological

arts" test established in *Toma* because the invention in *State Street* (i.e., a computerized system for determining the year-end income, expense, and capital gain or loss for the portfolio) was already determined to be within the technological arts under the *Toma* test. This dichotomy has been recently acknowledged by the Board of Patent Appeals and Interferences (BPAI) in affirming a §101 rejection finding the claimed invention to be non-statutory. [See *Ex parte Bowman*, 61 USPQ2d (BNA) 1669 (BdPatApp&Int 2001) - used only for content and reasoning since not precedential].

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
